### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-7, 10, 12-22, 24, 25 and 33-45 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Published Unexamined (Kokai) Patent Publication No. 58-33836 (hereinafter, Koizumi).**

Koizumi teaches a method of processing substrates wherein the substrate is treated with process gas that has been energized by powering an antenna that is external to the process chamber. Koizumi teaches monitoring the process by detecting radiation that is emitted through a window that is disposed within the exterior wall of the reaction chamber. See figures 1 and 2 and pages 3-4 of the USPTO translation.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**Claims 8, 9, 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koizumi in view of US Patent 5,807,761 issued to Coronel et al. (hereinafter, Coronel).**

Koizumi does not teach the use of a bifurcated radiation transmission cable.

Coronel teaches a method of monitoring a plasma process that uses a bifurcated radiation transmission cable.

It would have been obvious to one skilled in the art to use a bifurcated radiation transmission cable because Coronel demonstrates that such monitoring systems were known in the prior art and apparatus limitations, unless they affect the process in a manipulative sense, have little weight in process claims.
